

ERP Integration for Cegid Retail

Overview

Retail IT specialises in integrating Cegid Retail with established ERP systems, including NetSuite and Prima Software.

Our integration solutions optimise retail operations by connecting key functions such as sales, purchasing and supply chain management, inventory management, product management, financial management, and analytics.

By improving data accuracy, streamlining workflows, and enhancing customer experience, our integrations provide a unified platform for real-time insights and efficient management. This enables businesses to achieve greater operational effectiveness across all core retail functions.

Key Features

Financial Reporting

Centralise financial operations for accurate and transparent reporting.

Product Management

Streamline product data handling, ensuring consistency across all retail channels.

Inventory Management

Implement real-time inventory tracking and management to reduce errors and improve stock control.

Sales Integration

Unify eCommerce and Point of Sale (POS) systems to provide a consistent customer experience.

Supply Chain Management and Efficient Replenishment

Optimise supply chain operations and ensure timely and efficient replenishment of retail stores.

Data Synchronisation

Ensure data consistency across Cegid Retail and your ERP system through automated data integration.
