

Retail IT Advanced Inventory Scanner

Optimised Inventory Management

Overview

Enhance your retail operations with the Retail IT Advanced Inventory Scanner. Designed to improve efficiency and streamline inventory management, this app enables businesses to operate more effectively.

From processing purchase documents to managing customer orders, our scanner simplifies complex procedures, providing real time updates and precise stock control. This application removes the necessity for a dedicated Warehouse Management System (WMS), streamlining operations and reducing costs.

Key Features

Real-Time Inventory Updates

Receive immediate updates on inventory status, enabling informed decision-making and improved operational control.

Comprehensive Inventory Handling

Manage purchase documents, stock transfers, and conduct rapid item checks, including stock level and current price visibility.

Customer Order Fulfilment

Streamline order processing with integrated pick, pack, and dispatch functionalities, ensuring efficient and accurate order completion.

Efficient Stock Taking

Perform rapid and accurate stock takes, reducing reliance on cumbersome hardware and minimising manual errors.

Item Location Management

Easily locate items within warehouses and stockrooms to improve organisation and operational efficiency.
